

Please join us for the Berkeley Lab:

# Water–Energy Resilience Town Hall

Friday, February 3, 2017  
Bldg 66 Auditorium  
10:30-12:00

**Water-Energy:** Recognizing that new paradigms are needed to quantify water-energy dependencies and to ensure water resiliency, we seek proposals that contribute to building a crosscutting Berkeley Lab Water initiative. Analogous to electricity, to ensure water resiliency, we must develop understanding and new approaches associated with water distribution, generation and storage. We thus **seek LDRD proposals** that focus on: improved hydroclimate prediction of water distribution; breakthrough solutions that lower the energy intensity and cost of desalination to generate water; revolutionary concepts to store and reuse water; and data science and systems analysis to enable optimized water resiliency solutions across large regions. More information about this initiative is at <http://waterresilience.lbl.gov/>

**This Town Hall is a kickoff to discuss the lab wide “Water-Energy” LDRD initiative.** There will be a set of short talks describing some current water-energy projects at the lab followed by open discussion. It will be a good opportunity for attendees to discuss ideas for proposals and network with others who are interested in responding to this call. Please distribute to your staff who might be interested.
